## **Manual Software Install**

Last Modified on 09/30/2015 1:08 pm EDT

If the Wave cannot reach the internet or there's another reason not to use Vertical Updates, it is still possible to use a CAB file to manually update the Wave.

**Note:** Be sure to read the Release Notes for any software before you manually install it. Unlike Vertical Updates, manual installation does not automatically check for any software dependencies.

- 1. Choose a time when it is acceptable for the Wave to be out of service for up to 3 hours (depending on the update).
- 2. Login to the Wave (see Login to Wave IP Global Administrator).
- 3. Click on Software Upgrade.

4. Choose Manual Update.

| Global Administrator > Vertical Updates  |                  |                                |         |              |                 |                 |  |  |  |  |  |  |

- 7. If you are applying multiple software updates, choose Add instead and continue to use Browse to find other software. On the last update, click Start.
- 8. The Wave may reboot twice while applying updates.
