

ViewPoint Web vs ViewPoint Desktop

Last Modified on 11/12/2020 6:23 pm EST

- VPW includes a built-in video and audio Softphone, so you don't need a deskphone at all (or a VPN phone or a SIP phone).
- As long as you have a compatible browser (Chrome for now for video calls), there is no other software to install or update, unlike ViewPoint Desktop (VPD).
- VPW runs on Mac, Windows, and Linux, while VPD only runs on Windows.
- VPW is always up-to-date. No software to keep updated.
